ENUM

The instructions regarding operations of the domain e164.arpa that can be found at the URL: <http://www.ripe.net/rs/enum/instructions.html> are instructions from the IAB to the RIPE NCC. They do not implicitly give the ability for anyone to receive a domain delegation for an E.164 CC by contacting the RIPE NCC.

The RIPE NCC will not evaluate any requests for delegation that it happens to receive apart from the correctness of the technical information submitted in the request. (Please see specifications listed at: <http://www.ripe.net/ripe/docs/enum-request.html>).

The ITU-T TSB evaluates delegation requests and questions. We urge anyone interested in discussing E.164 matters that are not DNS related to contact ITU-T TSB.

Information on how TSB will handle ENUM requests can be found under the bullet "Interim Procedures" at the ITU-T Web site at: <http://www.itu.int/ITU-T/inr/enum/>.

The RIPE NCC is not performing any evaluation of requests for delegation of domains under e164.arpa. This is the responsibility of ITU-T TSB.

Charter

The ENUM Working Group discusses developments relating to Internet resource mapping using E.164 telephone numbers as identifiers, commonly known as ENUM. The working group monitors and promotes initiatives to advance this technology. It also identifies ways for the RIPE community to develop and nurture the use of ENUM.

Current Activities

A status page to identify and document the various ENUM projects being conducted in different countries can be found [here](#).

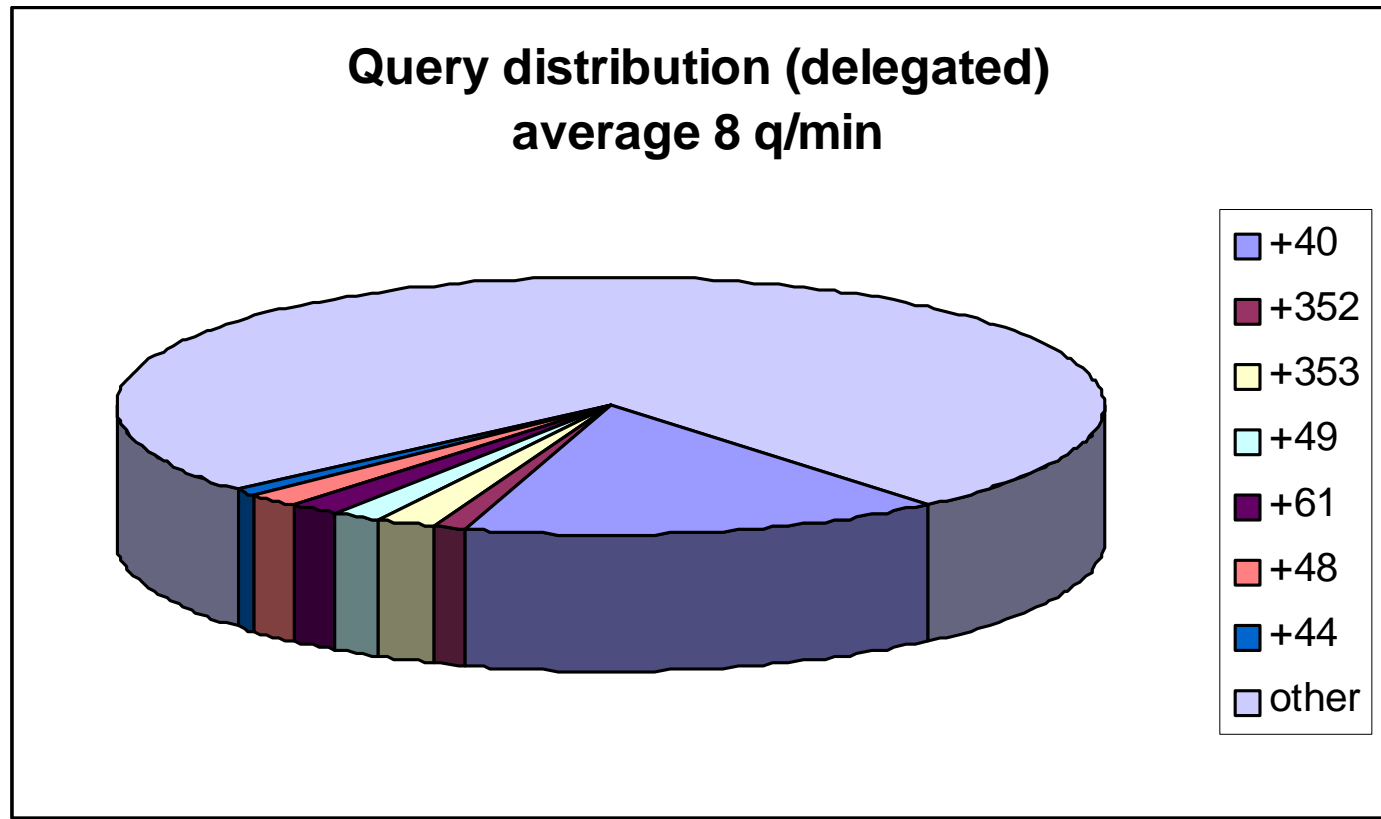

Delegations Made in 2005

- +61 - Australia (January)
- +354 - Iceland (February)
- +47 - Norway (March)
- +82 - Korea (May)
- +66 - Thailand (June)
- +63 - Philippines (September)

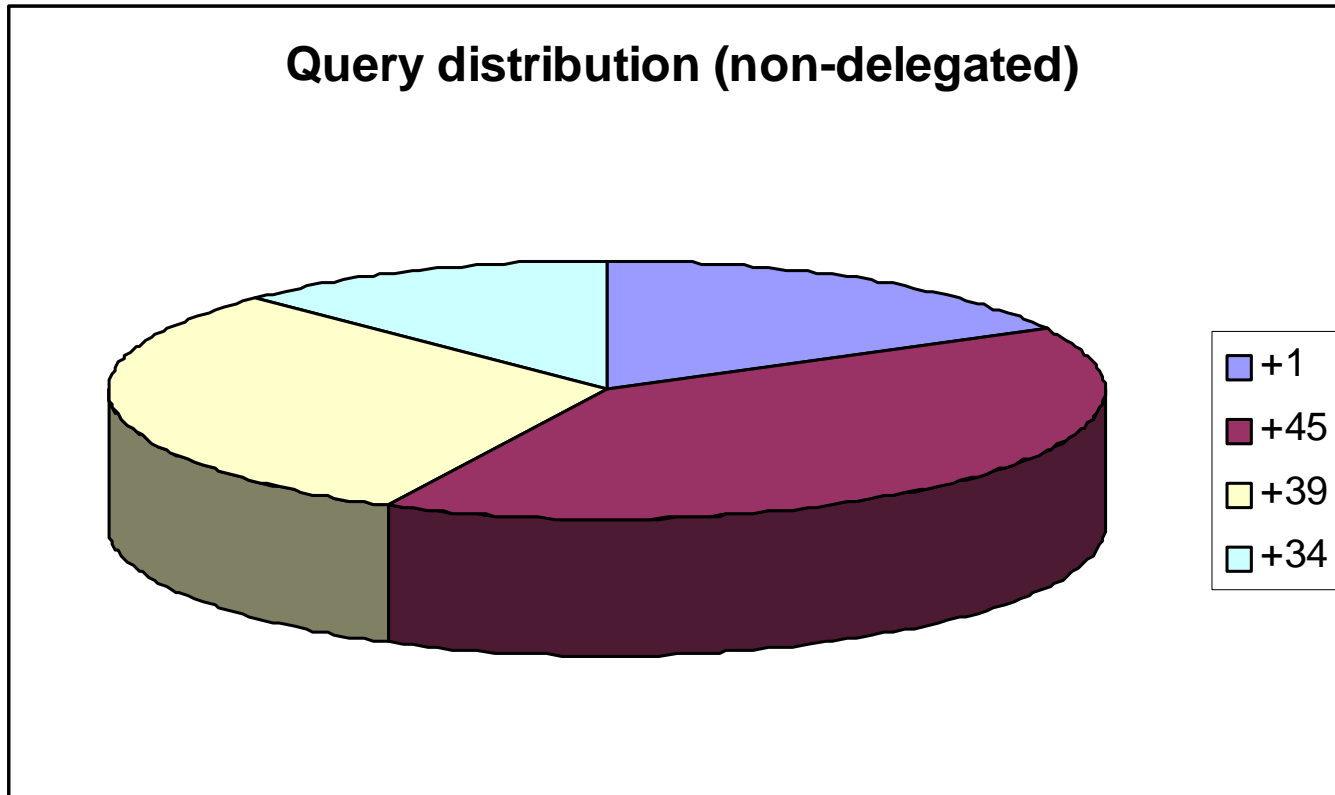

Objected Requests

- +66 - Thailand
 - Objected in May
 - Approved in June
